

How to connect a laptop in a TEL space

Presenters can connect their own laptops to the TEL spaces

Step 1. Get setup

Place laptop on presenter's desk next to the grey or black HDMI cable. This black cable has an Ethernet cable secured to it which can be inserted into a laptop as well.

*Apple users might need to bring their own adaptor

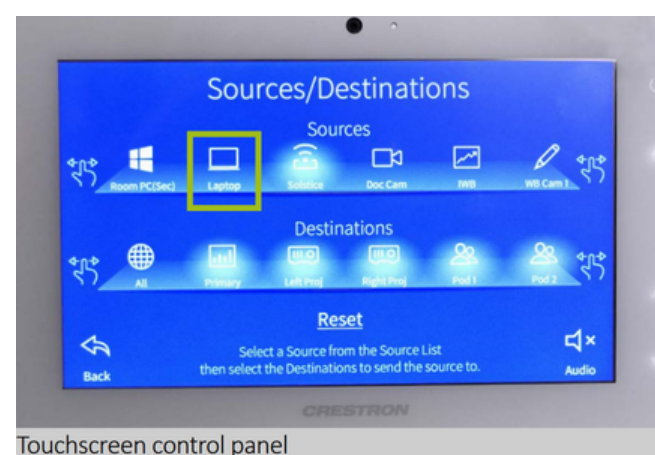

None of the 9 TEL spaces support VGA. If your computer requires this, you must bring your own adapter

Step 2. Connect

Pick up the HDMI cable and insert into the side of laptop

- For Apple laptops, an Apple adapter may be required
- Connect the HDMI cable on the presenter desk to one end of the Apple adapter.
- Then connect other end of the Apple adapter to your Apple laptop.

Step 3. Display

If your laptop is not on, please turn on your laptop

- Room will turn on
- Laptop icon will light up on display
- Content on laptop monitor will be displayed onto main room screens

If it doesn't work repeat process or remove and re-insert cables
