

## PROJECT DETAILS

Project Title:

**Transformation of online mental health services (TOMHS) for use in community health settings in Western Australia**

Project Summary: aims, significance, expected outcomes and potential research impact.

PhD project aims to conduct an evaluation of online mental health services (OMHS) for use by health professionals in community settings in Western Australia and develop a digital platform of available OMHS based on quality, effectiveness, usability, and clinical guidelines. Development of a digital platform Transformation of Online Mental Health Services (TOMHS) will generate a system to manage, organise, and store digital OMHS content efficiently for shared use by health professionals and policy makers to support effective mental health services decision-making. This will facilitate health professionals to recommend and provide the best available clinically relevant and age appropriate OMHS.

Preferred applicant skill set, describe the capabilities of the HDR applicant:

A proactive PhD candidate able to work independently.

- Health professional (nursing, psychology or medicine) working in mental healthcare services.
- Some prior experience in using online mental health resources.
- Some previous experience of working in a research team environment.
- Some experience of writing research reports, publications or other relevant outputs.
- Excellent interpersonal, networking and communication skills.
- Proven problem solving skills.
- Excellent ICT skills.
- A clear commitment to contributing to the research environment and producing high quality research outputs.
- Flexible and adaptive with a positive approach to managing substantial projects and associated resources.
