Virtual Private Network (VPN)

A Virtual Private Network (VPN) enables you to connect to the internal ECU network from home, and securely access internal-only websites and shared drives.

Blackboard, Collaborate, MS Teams and other learning technologies do not require a VPN to be accessed.

When may a VPN be useful?

You may want to install the VPN on your personal device, to connect to shared drives and internal-only resources from your School.

Information on downloading and setting up the VPN can be found here:

VPN

Need help?

All VPN inquiries should be directed to the **IT Service Desk**
