

BE UNIQUE!

Your password is easier to hack than you think.

Over 99% of passwords can be found within the top 10,000 most commonly used passwords. **Make your information more secure** by creating a password that is complex to all yet memorable to you!

Here's how:

1. Start with a phrase that's important to you - a line from a special song, a memorable event, an inspiring quote - then take the first letter of each word.
2. Randomly replace letters to generate a password with upper case letters, lower case letters and special characters.
3. Remember your personal system. Then alter it slightly for different websites/systems - such as by adding a relevant tag at the beginning or end. Create new password systems for critical accounts, i.e. ECU.

It Was A Dark And Stormy Night
